

# IntegriScan<sup>+</sup>

by Detec

The **IntegriScan+** is a point in time, quality control Electronic Leak Detection (ELD) testing service that confirms the integrity of the waterproofing/roofing membrane installation.

✓ Tests 100% of the waterproofing/roofing membrane versus other “hunt and peck” methods

✓ Reliably tests vertical surfaces

✓ Wall junctions, perimeter details and membrane penetrations are easily tested

✓ Tests up to 40,000 ft<sup>2</sup> per day

✓ Detects hard to see breaches

✓ Breach repairs can be re-tested the same day – **NO EXTRA CHARGE!**

✓ Minimal set up time; No perimeter wire required; No need to isolate penetrations

✓ Audio and visual components for easy and accurate breach location alerts

✓ Tests conventional membranes with TruGround Conductive Primer directly under the membrane

✓ **ONLY** ELD method available for testing black EPDM and other semi-conductive membranes

✓ Can be used for forensic testing of existing roofs

✓ The most advanced, accurate, reliable, and cost effective ELD method available

✓ Superior alternative to flood testing

✓ **Sections 6 & 8 on the ASTM D7877** (Standard Guide for Electronic Methods for Detecting and Locating Leaks)
